Valier UI Phase 3A Foundation Pack v2

This foundation pack fixes the broken Phase 3 preview workflow by preserving the original atlas crops and outlines. It is focused on naming rules, panel standards, and control families rather than automated transparency cleanup.

Use the preserved reference atlas as the visual truth source until individual assets are hand-cleaned. Do not trust automated alpha extraction for this art family without manual review.

1. Visual system rules

The Valier UI language is dark gothic with restrained steampunk influence. Primary surfaces are dark stone, smoked leather, and aged parchment. Borders are worn brass and antique gold. Green is for active or confirm, amber for hover or attention, and red-copper for danger or destructive actions.

Role	Hex	Use
Antique Gold	#A98636	Trim, title accents, ornate edges
Brass Shadow	#6F5520	Depth, bevel shadow, edge wear
Stone Charcoal	#2C2721	Panel base, low-focus surfaces
Aged Parchment	#C6B18B	Readable inner surfaces, spellbook pages
Active Green	#6E8B55	Selected tabs, confirm, live state
Hover Amber	#B28A3D	Hover feedback, warm highlight
Danger Copper	#8C4A2B	Cancel, pressed danger, warnings

2. Naming and family structure

Use role-based names first, then family, then state. Keep fixed windows in Frames and scalable surfaces in Panels. Use strips and sheets only for source grouping, then derive final state exports from them.

Family	Core exports
Buttons	primary blank, primary a idle/hover/pressed, primary b idle/hover/pressed, round danger idle/hover
Checkbox / Radio	checkbox off/on variants, radio off/on
Panels / Frames	panel main, panel side tall, frame window tall, frame card
Chat	chat frame concept, chat input frame, chat input thumb
Hotbars	8-slot base, alt, active
Inventory / Spellbook	inventory grid, reagent bag, spellbook base

3. Panel standards

Phase 3A panels must preserve silhouette and edge shading. No automated masking pass should be used on the production-structure package. Corners never stretch, border bands stretch minimally, and the center absorbs the majority of scaling.

Main panel defaults: 54 px left, 50 px top, 54 px right, 50 px bottom. These values are stored again in the 9-slice metadata JSON.

Rule	Meaning
Corners	Never stretch or auto-trim.
Edges	Stretch only lightly; preserve border identity.
Center	Primary scaling zone for text and controls.
Padding	Start at 16 px minimum, larger for forms and chat.
Transparency	Do not auto-clean in the foundation pack.

4. Recommended handoff

Finish the system foundation here, then take this v2 pack into the ValierUO client chat for actual ClassicUO integration. That is where gump replacement, file mapping, and client-side build work belong.
